# INTRODUCTION

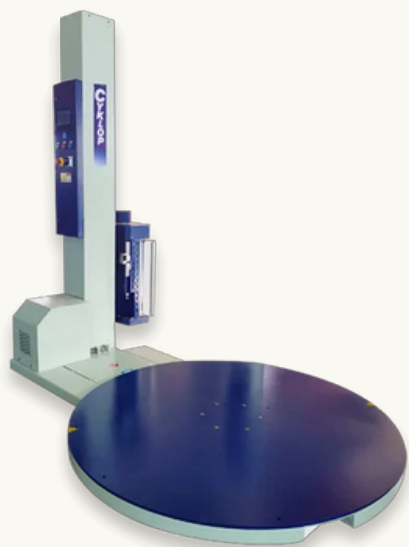

At Madad Service Provider, we have been Secondary packing & coding and marking for 6 years. Founded in 2017, our journey began with a passion for machinery service and troubleshooting. Since then, we have grown and evolved, shaping ourselves into a leading company in the manufacturing industry's company.

Our team is a dynamic blend of industry experts, engineers, and visionaries who share a passion for machinery and a dedication to customer success. We understand the unique challenges various industries face, which is why our product range is diverse, tailored to meet a broad spectrum of needs.

We embarked on this remarkable path with a clear mission - to revolutionize the machinery landscape and empower industries worldwide. Our vision goes beyond business; it's a commitment to progress. We aim to be pioneers in the field, consistently pushing the boundaries of technology and design to deliver machinery solutions that set new standards for quality, efficiency, and sustainability. Our values, deeply ingrained in our corporate culture, guide our every decision.

# WRAPPING

---

Pallet wrapping is a technique whereby thin plastic film is wrapped around a pallet or product. This can be done manually or mechanically. Various terms are used, such as wrapping, film wrapping, stretch wrapping and pallet wrapping, but they all mean the same.

---

By means of wrapping it is possible to bundle or secure products and / or protect them against falling over, getting damaged or accumulating dirt during transport and storage. The ultimate objective is to package products properly, without getting damaged and against the lowest (total) costs, to ship them from A to B.

---

# STRAPPING

---

Strapping is a process whereby a metal or plastic strap is placed around a product or pallet to bundle it, reinforce it, or attach it to something.

---

The ultimate objective of strapping something is to transport and / or store products / loads quickly and without damage in a safe & efficient way.

---

The strap is placed around the product (horizontally or vertically), and the ends come together again. By means of a device or machine, the ends are pulled towards and over each other to build up tension. After tensioning the strap, the ends must be attached to one another to maintain the tension

# TAPING

01

Taping is the application of (adhesive) tape on a cardboard box, for example, or other surface. In the packaging industry, taping is often used to close something, usually a box or packaging.

02

In addition, tape is also often use to bundle or mark products, to communicate a message or to prevent theft.

03

The ultimate objective of taping is to be able to store and/or send your products without any damage, so that they arrive at your customer in perfect condition.

# CODING & MARKING TECHNOLOGY

Thermal Inkjet  
Printer

A specific kind of inkjet printer created for use in the packaging sector is the CM 600 Thermal Inkjet Printer. On a range of packaging materials, it provides high-resolution and high-quality printing using thermal inkjet technology.

# CODING & MARKING TECHNOLOGY

Coding involves the application of text, figures, symbols or other shapes on a product or packaging by means of ink. Various terms are used, such as coding, printing or marking, but they all mean the same. Coding has several applications and objectives and there are different ways in which coding can take place.

# UV LASER MARKING SYSTEM

---

---

CM 800 U series UV- laser marking system is due to its extremely small focusing spot and minimal processing heat and impact on material especially suitable for ultra-fine marking, special material marking, such as food, tobacco, medicine, electronic components, chemicals, building materials, painted metal surface, glass and many other applications.

A laser from the CM 800 series is the first choice for customers with high demands on marking quality.

---

## Benefits

- Fully enclosed maintenance-free optical system
- Ultra-high-speed for up to 150.000 markings per hour
- “Cold processing” with small focal spot and heat effect, ensures the minimization of package damage
- Easy to operate
